

Bird Health Issue at Suffolk Farm

17 April 2013

Bernard Matthews can confirm that some of the birds at one of the business' farms showed signs of ill health over the weekend.

The company felt it was appropriate to report this to DEFRA. They have detected the presence of an avian influenza virus, but not the virulent H5 or H7 form. Some restrictions are in place as a precaution, but are expected to be lifted in the next few days.
